

# Basic Introductory Problems

(Total 15 questions)

SL	Problem statement	Difficulty levels						
1.	<p>Program that will print “Hello World”.</p> <table border="1"><tr><td><b>Sample input</b></td><td><b>Sample output</b></td></tr><tr><td></td><td>Hello World</td></tr></table>	<b>Sample input</b>	<b>Sample output</b>		Hello World	*		
<b>Sample input</b>	<b>Sample output</b>							
	Hello World							
2.	<p>Program that will use newline/tab and print the following segment:</p> <table border="1"><tr><td><b>Sample input</b></td><td><b>Sample output</b></td></tr><tr><td></td><td>Hello World. This is my first program. C is fun.</td></tr></table>	<b>Sample input</b>	<b>Sample output</b>		Hello World. This is my first program. C is fun.	*		
<b>Sample input</b>	<b>Sample output</b>							
	Hello World. This is my first program. C is fun.							
3.	<p>Program that will print the following segment:</p> <table border="1"><tr><td><b>Sample input</b></td><td><b>Sample output</b></td></tr><tr><td></td><td>The question is - “How to write a \comment/ in C programming language?”</td></tr></table>	<b>Sample input</b>	<b>Sample output</b>		The question is - “How to write a \comment/ in C programming language?”	*		
<b>Sample input</b>	<b>Sample output</b>							
	The question is - “How to write a \comment/ in C programming language?”							
4.	<p>Program that will declare an integer, a floating point number, a character. Then it will initialize them with values and print those values.</p> <table border="1"><tr><td><b>Sample input</b></td><td><b>Sample output</b></td></tr><tr><td></td><td>The integer value: 5 The floating point value: 3.141593 The character value: a</td></tr><tr><td></td><td>The integer value: 100 The floating point value: 1.618000 The character value: z</td></tr></table>	<b>Sample input</b>	<b>Sample output</b>		The integer value: 5 The floating point value: 3.141593 The character value: a		The integer value: 100 The floating point value: 1.618000 The character value: z	*
<b>Sample input</b>	<b>Sample output</b>							
	The integer value: 5 The floating point value: 3.141593 The character value: a							
	The integer value: 100 The floating point value: 1.618000 The character value: z							
5.	<p>Program that will do the followings:</p> <ul style="list-style-type: none"><li>a) Declare a variable uninitialized</li><li>b) Declare and initialize a variable in one statement</li><li>c) Declare and initialize multiple variables with different values in one statement</li><li>d) Declare and initialize multiple variables with the same value in one statement</li></ul>	*						

6.	<p>Program that will take your age in year(s) as input and print it.</p> <table border="1" data-bbox="181 175 1351 297"> <thead> <tr> <th data-bbox="181 175 752 219">Sample input</th><th data-bbox="752 175 1351 219">Sample output</th></tr> </thead> <tbody> <tr> <td data-bbox="181 219 752 264">20</td><td data-bbox="752 219 1351 264">My age is: 20</td></tr> <tr> <td data-bbox="181 264 752 297">21</td><td data-bbox="752 264 1351 297">My age is: 21</td></tr> </tbody> </table>	Sample input	Sample output	20	My age is: 20	21	My age is: 21	*
Sample input	Sample output							
20	My age is: 20							
21	My age is: 21							
7.	<p>Program that will receive the values of an integer, a floating point number, a character from the keyboard and print those values.</p> <table border="1" data-bbox="181 492 1351 777"> <thead> <tr> <th data-bbox="181 492 752 536">Sample input</th><th data-bbox="752 492 1351 536">Sample output</th></tr> </thead> <tbody> <tr> <td data-bbox="181 536 752 656">5 3.141593 a</td><td data-bbox="752 536 1351 656">The integer value: 5 The floating point value: 3.141593 The character value: a</td></tr> <tr> <td data-bbox="181 656 752 777">100 1.618 z</td><td data-bbox="752 656 1351 777">The integer value: 100 The floating point value: 1.618000 The character value: z</td></tr> </tbody> </table>	Sample input	Sample output	5 3.141593 a	The integer value: 5 The floating point value: 3.141593 The character value: a	100 1.618 z	The integer value: 100 The floating point value: 1.618000 The character value: z	*
Sample input	Sample output							
5 3.141593 a	The integer value: 5 The floating point value: 3.141593 The character value: a							
100 1.618 z	The integer value: 100 The floating point value: 1.618000 The character value: z							
8.	<p>Program that will take three integer numbers from keyboard but assign only the first and last inputs to variables and <u>skip</u> any assignment of the middle one.</p> <table border="1" data-bbox="181 971 1351 1108"> <thead> <tr> <th data-bbox="181 971 752 1015">Sample input</th><th data-bbox="752 971 1351 1015">Sample output</th></tr> </thead> <tbody> <tr> <td data-bbox="181 1015 752 1060">20 50 100</td><td data-bbox="752 1015 1351 1060">First Value = 20, Last Value = 100</td></tr> <tr> <td data-bbox="181 1060 752 1108">33 75 22</td><td data-bbox="752 1060 1351 1108">First Value = 33, Last Value = 22</td></tr> </tbody> </table>	Sample input	Sample output	20 50 100	First Value = 20, Last Value = 100	33 75 22	First Value = 33, Last Value = 22	**
Sample input	Sample output							
20 50 100	First Value = 20, Last Value = 100							
33 75 22	First Value = 33, Last Value = 22							
9.	<p>Program that will declare a variable from each data type: double, boolean. Then it will initialize them with values and print them.</p> <table border="1" data-bbox="181 1294 1351 1505"> <thead> <tr> <th data-bbox="181 1294 752 1339">Sample input</th><th data-bbox="752 1294 1351 1339">Sample output</th></tr> </thead> <tbody> <tr> <td data-bbox="181 1339 752 1417"></td><td data-bbox="752 1339 1351 1417">The double value: 3.140000e+00 The boolean value: 1</td></tr> <tr> <td data-bbox="181 1417 752 1505"></td><td data-bbox="752 1417 1351 1505">The double value: 1.618039 The boolean value: 0</td></tr> </tbody> </table>	Sample input	Sample output		The double value: 3.140000e+00 The boolean value: 1		The double value: 1.618039 The boolean value: 0	*
Sample input	Sample output							
	The double value: 3.140000e+00 The boolean value: 1							
	The double value: 1.618039 The boolean value: 0							
10.	<p>Program that will declare a variable from each data type: long int, long long int, long double, short int. Then it will initialize them with values and print them.</p> <table border="1" data-bbox="181 1731 1351 1930"> <thead> <tr> <th data-bbox="181 1731 752 1776">Sample input</th><th data-bbox="752 1731 1351 1776">Sample output</th></tr> </thead> <tbody> <tr> <td data-bbox="181 1776 752 1930"></td><td data-bbox="752 1776 1351 1930">The long int value: 2147483647 The long long int value: 9223372036854775807 The long double value: 1.1E+4932 The short int value: 32767</td></tr> </tbody> </table>	Sample input	Sample output		The long int value: 2147483647 The long long int value: 9223372036854775807 The long double value: 1.1E+4932 The short int value: 32767	**		
Sample input	Sample output							
	The long int value: 2147483647 The long long int value: 9223372036854775807 The long double value: 1.1E+4932 The short int value: 32767							

	<p>The long int value: -2,147,483,648      The long long int value: -9223372036854775808      The long double value: 3.4E-4932      The short int value: -32768</p>							
11.	Program that will declare a variable from each data type: unsigned int, unsigned long int, unsigned long long int, unsigned short int. Then it will initialize them with values and print them.  <table border="1"> <thead> <tr> <th>Sample input</th><th>Sample output</th></tr> </thead> <tbody> <tr> <td></td><td>The unsigned int value: 4294967295 The unsigned long int value: 4294967295 The unsigned long long int value: 18446744073709551615 The unsigned short int value: 65,535</td></tr> <tr> <td></td><td>The unsigned int value: 0 The unsigned long int value: 0 The unsigned long long int value: 0 The unsigned short int value: 0</td></tr> </tbody> </table>	Sample input	Sample output		The unsigned int value: 4294967295 The unsigned long int value: 4294967295 The unsigned long long int value: 18446744073709551615 The unsigned short int value: 65,535		The unsigned int value: 0 The unsigned long int value: 0 The unsigned long long int value: 0 The unsigned short int value: 0	**
Sample input	Sample output							
	The unsigned int value: 4294967295 The unsigned long int value: 4294967295 The unsigned long long int value: 18446744073709551615 The unsigned short int value: 65,535							
	The unsigned int value: 0 The unsigned long int value: 0 The unsigned long long int value: 0 The unsigned short int value: 0							
12.	Program that will define a constant using “CONST” and print the value.  <table border="1"> <thead> <tr> <th>Sample input</th><th>Sample output</th></tr> </thead> <tbody> <tr> <td></td><td>The value of pi: 3.14</td></tr> <tr> <td></td><td>The value of golden ratio: 1.62</td></tr> </tbody> </table>	Sample input	Sample output		The value of pi: 3.14		The value of golden ratio: 1.62	**
Sample input	Sample output							
	The value of pi: 3.14							
	The value of golden ratio: 1.62							
13.	Program that will define a constant using “DEFINE” and print the value.  <table border="1"> <thead> <tr> <th>Sample input</th><th>Sample output</th></tr> </thead> <tbody> <tr> <td></td><td>The value of HEIGHT: 200</td></tr> <tr> <td></td><td>The value of PI: 3.14</td></tr> </tbody> </table>	Sample input	Sample output		The value of HEIGHT: 200		The value of PI: 3.14	**
Sample input	Sample output							
	The value of HEIGHT: 200							
	The value of PI: 3.14							
14.	Program that will define a global and a local variable with the same name but with different values, and then do the following steps <u>in order</u> - <ol style="list-style-type: none"> <li>Print the value of the variable before defining the local variable</li> <li>Print the value of the variable after defining the local variable</li> <li>Explicitly print the value of the variable as global</li> </ol> <table border="1"> <thead> <tr> <th>Sample input</th><th>Sample output</th></tr> </thead> <tbody> <tr> <td></td><td>A. Global: 10 B. Local: 20 C. Global: 10</td></tr> </tbody> </table>	Sample input	Sample output		A. Global: 10 B. Local: 20 C. Global: 10	**		
Sample input	Sample output							
	A. Global: 10 B. Local: 20 C. Global: 10							

15.	<p>Program that will take an floating point number as input from the keyboard and use <i>printf</i> function to perform the followings:</p> <ul style="list-style-type: none"> <li>(a) Print the number right justified within 10 columns</li> <li>(b) Print the number to be right justified to 2 columns (Assuming the input has more than 2 digits)</li> <li>(c) Print the number rounded to two decimal places</li> <li>(d) Print the number rounded to integer (without using conversion or type casting)</li> <li>(e) Prints the number in exponential notation/scientific notation</li> </ul> <table border="1" data-bbox="181 671 1346 910"> <thead> <tr> <th>Sample input</th><th>Sample output</th></tr> </thead> <tbody> <tr> <td>123.098</td><td>           (a) Val: 123.098000            (b) Val:123.098000            (c) Val:123.10            (d) Val:123            (e) Val: 1.230980e+02         </td></tr> </tbody> </table>	Sample input	Sample output	123.098	(a) Val: 123.098000 (b) Val:123.098000 (c) Val:123.10 (d) Val:123 (e) Val: 1.230980e+02	**
Sample input	Sample output					
123.098	(a) Val: 123.098000 (b) Val:123.098000 (c) Val:123.10 (d) Val:123 (e) Val: 1.230980e+02
